

I would like to express opposition to the proposal to regulate modes within the 160m Band.

By all accounts, the ruling is not required. The biggest issue with 160m is that it's not used ENOUGH, not that it suffers from a lack of segregation between modes.

I also believe that the request is self serving and does NOT serve the interest of the vast majority of hams that use the band...nor does overregulation and big government serve these majority interests.

Kindly do NOT authorize any arbitrary allocation of 160M! It's just not needed!

Best regards
John Brewer
